PROFESSIONAL SUMMARY

Cloud & Software Engineer building production-style systems on AWS (EC2, S3, CloudFront, ALB, Auto Scaling, CloudWatch) using Infrastructure-as-Code (Terraform) and containerized workloads (Docker, Kubernetes). Built REST APIs and serverless architectures (API Gateway, Lambda) with Django and Python, and automated CI/CD pipelines with GitHub Actions using OIDC short-lived credentials. Backed by 2+ years of prior IT support and systems administration experience across university and enterprise environments, supporting 200+ users. Combines cloud infrastructure fundamentals with full-stack development and machine learning skills to deliver secure, scalable solutions.

TECHNICAL SKILLS

Cloud: AWS — EC2, S3, IAM, CloudFront, Route 53, ALB, Auto Scaling, ACM, CloudWatch, OIDC/STS, Budgets

IaC & Containers: Terraform, Docker, Docker Compose, Kubernetes (kubectl, Deployments, Services, ConfigMaps)

Languages: Python, JavaScript (ES6+), TypeScript, SQL, Bash, HTML5, CSS3

Frameworks: Django, Django REST Framework, Flask, React, Node.js, Express, Tailwind CSS

DevOps: GitHub Actions, CI/CD Pipelines, GitOps, Linux (Ubuntu), Bash Scripting, Git

Databases: MySQL, SQLite, DynamoDB, Supabase (PostgreSQL)

ML & Data: Scikit-learn, Pandas, NumPy, Keras, EDA, Feature Engineering, Model Evaluation

Security: DNS, HTTPS/TLS, IAM Least-Privilege, OIDC, Origin Access Control, Load Balancing, VPC

EXPERIENCE

Kwame Nkrumah University of Science and Technology (KNUST)

Oct 2024 – Sep 2025

Information Technology Technician

Kumasi, Ghana

- Delivered Tier-1 and Tier-2 support to 200+ staff and students, resolving hardware, software, and network incidents.
- Introduced scheduled maintenance procedures and standardized troubleshooting documentation across the IT team, cutting down on repeat tickets for common issues.
- Administered Active Directory accounts and network resources for 5+ academic and administrative departments.
- Built an internal knowledge base covering 40+ common procedures, used to onboard new IT staff faster.

M365Connect

Dec 2024 – Mar 2025

Python Developer (Backend) / Remote

Germany

- Built REST APIs with Django REST Framework powering data exchange across multiple client applications.
- Wrote Python web scraping pipelines to automate collection of large datasets, replacing manual data-gathering work.
- Integrated third-party APIs and refactored ORM queries to improve backend efficiency.

HubbleMind

Nov 2024 – Dec 2024

Data Science Intern — Machine Learning & AI

Remote

- Cleaned and preprocessed 5,000+ multi-country health records using IQR outlier treatment, encoding, and feature engineering.
- Trained Logistic Regression and Random Forest classifiers to predict obesity levels, reaching 88% accuracy; presented model comparison findings to the team.

Lerato Consult

Nov 2022 – Dec 2024

OS Technician & IT Support Assistant

Greater Accra Region, Ghana

- Installed and configured POS systems for 10+ retail and hospitality clients across multiple sites.
- Diagnosed and resolved hardware and network issues on-site, helping reduce client downtime.
- Built a documentation library of 50+ support procedures to standardize service quality across the team.

PROJECTS

Student Study Planner — AWS Capstone Project | github.com/GeekKwame/aws-capstone-project 2026

- Deployed a full-stack study planner on AWS using Route 53, CloudFront CDN, ALB, EC2 (Nginx), S3, ACM, and GitHub Actions CI/CD across four documented phases.
- Secured the architecture with OAC for S3 static asset delivery, CloudFront Prefix List restrictions on the ALB security group, and EC2 access limited solely to the ALB.
- Configured an Auto Scaling Group for traffic spikes, CloudWatch alarms for CPU and 5xx errors, and AWS Budget alerts to prevent unexpected Free Tier charges.
- *Stack:* AWS (Route 53, CloudFront, ALB, EC2, S3, ACM, Auto Scaling, CloudWatch), Nginx, GitHub Actions

PulseVote — Live Polling App | github.com/GeekKwame/pulsevote 2026

- Built and deployed a real-time polling web application on AWS using CloudFront, ALB, EC2, S3, ACM, and GitHub Actions CI/CD with automated zero-downtime deployments via SCP and SSH.
- Restricted ALB ingress to the CloudFront Managed Prefix List and EC2 ingress solely to the ALB security group, eliminating direct public access to the origin.
- Configured CloudWatch Alarms for EC2 CPU utilization and ALB 5xx error rates, with log retention policies and AWS Budget alerts for cost control.
- *Stack:* AWS (CloudFront, ALB, EC2, S3, ACM, Auto Scaling, CloudWatch), Nginx, GitHub Actions

Terraformed — Secure Static-Site Infrastructure | github.com/GeekKwame/terraformed-r61ect 2026

- Built a zero-secret CI/CD pipeline using AWS OIDC and GitHub Actions, replacing long-lived access keys with short-lived STS session credentials on every deployment.
- Locked down the S3 origin with CloudFront Origin Access Control (OAC), blocking all public access while serving HTTPS traffic.
- Configured remote Terraform state with S3 versioning and DynamoDB locking to prevent concurrent-run state corruption.
- *Stack:* Terraform, AWS (S3, CloudFront, OAC, IAM/OIDC, DynamoDB), GitHub Actions

Serverless API Platform — Terraform + Lambda | github.com/GeekKwame 2026

- Provisioned an API Gateway → Lambda → S3 architecture end-to-end in Terraform, removing server management overhead.
- Enforced least-privilege IAM policies scoped to specific S3 actions and API Gateway source ARNs to minimize the Lambda execution role's attack surface.
- Automated Lambda packaging and idempotent redeployment using `archive_file` and `source_code_hash` for automatic change detection.
- *Stack:* Terraform, AWS (API Gateway, Lambda, S3, IAM, DynamoDB), Python

The Tourist Planner — Full-Stack AI Travel App | github.com/GeekKwame/travel-planner 2025

- Developed a full-stack AI travel app with JWT authentication, role-based access control, Stripe payments, and a Supabase (PostgreSQL) backend.
- Used Supabase real-time subscriptions to keep trip data in sync across clients; designed the architecture with a future AWS migration in mind.
- *Stack:* React, TypeScript, Supabase, Stripe, AI APIs

WhaleStack — Multi-Container Web Application | github.com/GeekKwame/whalestack 2025

- Containerized a multi-service application with Docker Compose, orchestrating an independently networked Flask REST API and an Nginx-served static frontend.
- Designed and exposed REST endpoints for service info, JSON messaging, and health checks, enabling reliable frontend-backend communication across container boundaries.
- *Stack:* Docker, Docker Compose, Flask (Python), Nginx

EDUCATION

Azubi Africa

Cloud Computing & Artificial Intelligence Program

Apr 2026 – Present

Remote

Kwame Nkrumah University of Science and Technology (KNUST)

Bachelor of Science in Applied Mathematics

Jan 2021 – Aug 2024

Kumasi, Ghana
