PROFESSIONAL SUMMARY

Cloud & Software Engineer building production-style systems on AWS. Recent work: Event-Connect, a serverless event-registration app where CloudFront is the only public HTTPS endpoint (private S3 + OAC, API Gateway as a hidden origin, WAF default-deny). Also ships Terraform and containerized workloads (Docker, Kubernetes), Django REST APIs, and GitHub Actions CI/CD with OIDC short-lived credentials. Backed by 2+ years of IT support and systems administration supporting 200+ users across university and enterprise environments.

TECHNICAL SKILLS

Cloud: AWS — EC2, S3, IAM, CloudFront, Route 53, ALB, Auto Scaling, ACM, Lambda, API Gateway, WAF, Secrets Manager, SES, CloudWatch, CloudTrail, SNS, SQS, EventBridge, OIDC/STS, Budgets

IaC & Containers: Terraform, AWS SAM, Docker, Docker Compose, Kubernetes (kubect!, Deployments, Services, ConfigMaps)

Languages: Python, JavaScript (ES6+), TypeScript, SQL, Bash, HTML5, CSS3

Frameworks: Django, Django REST Framework, Flask, React, Node.js, Express, Tailwind CSS

DevOps: GitHub Actions, CI/CD Pipelines, GitOps, Linux (Ubuntu), Bash Scripting, Git

Databases: DynamoDB, MySQL, SQLite, Supabase (PostgreSQL)

ML & Data: Scikit-learn, Pandas, NumPy, Keras, EDA, Feature Engineering, Model Evaluation

Security: DNS, HTTPS/TLS, IAM Least-Privilege, OIDC, Origin Access Control, WAF Default-Deny, Load Balancing, VPC

Testing: Pytest, Moto (AWS mocking), Unit Testing

EXPERIENCE

Kwame Nkrumah University of Science and Technology (KNUST)

Oct 2024 – Sep 2025

Information Technology Technician

Kumasi, Ghana

- Delivered Tier-1 and Tier-2 support to 200+ staff and students, resolving hardware, software, and network incidents.
- Introduced scheduled maintenance procedures and standardized troubleshooting documentation, cutting repeat tickets for common issues.
- Administered Active Directory accounts and network resources for 5+ academic and administrative departments.
- Established an internal knowledge base covering 40+ procedures, accelerating onboarding for new IT staff.

M365Connect

Dec 2024 – Mar 2025

Python Developer (Backend) / Remote

Germany

- Designed REST APIs with Django REST Framework, powering data exchange across 3 client applications.
- Automated Python web scraping pipelines to collect large datasets, eliminating manual data-gathering work.
- Integrated third-party APIs and refactored ORM queries, improving backend query efficiency.

HubbleMind

Nov 2024 – Dec 2024

Data Science Intern — Machine Learning & AI

Remote

- Cleaned and preprocessed 5,000+ multi-country health records using IQR outlier treatment, encoding, and feature engineering.
- Trained Logistic Regression and Random Forest classifiers to predict obesity levels at 88% accuracy; presented findings to the team.

Lerato Consult

Nov 2022 – Dec 2024

OS Technician & IT Support Assistant

Greater Accra Region, Ghana

- Installed and configured POS systems for 10+ retail and hospitality clients across multiple sites.
- Diagnosed and resolved hardware and network issues on-site, reducing client downtime.
- Compiled a documentation library of 50+ support procedures, standardizing service quality across the team.

PROJECTS

Event-Connect — Serverless Event Registration | Live | GitHub 2026

- Built a production event-registration system on AWS SAM where CloudFront is the only public HTTPS endpoint; S3 stays private behind OAC and API Gateway is a hidden origin.
- Enforced WAF default-deny plus an origin-verify header so requests that skip CloudFront never reach compute; five Python 3.12 Lambdas persist events and tickets in DynamoDB.
- Shipped browse/register with an on-screen ticket receipt, browser-local My tickets, and email lookup. Confirmation is emailed (Gmail may file it as spam); the ticket is DynamoDB plus the receipt, not the inbox.
- Scoped SNS to an admin topic only; SES sandbox with Resend fallback from a verified domain. Admin session for list-all and cancel; secrets stay in Secrets Manager.
- *Stack:* AWS SAM, CloudFront, S3/OAC, API Gateway, WAF, Lambda (Python 3.12), DynamoDB, SNS, SES, Secrets Manager, CloudWatch

Smart Task Notification System — Event-Driven Serverless API | GitHub 2026

- Built a serverless task API on AWS where a single write fans out to DynamoDB, SNS, SQS, and EventBridge via a Lambda handler behind API Gateway.
- Designed graceful-degradation logic so SNS/SQS delivery failures are logged without failing the client request.
- Defined the stack as AWS SAM; validated with `pytest` + `moto` in CI; CloudWatch Lambda-error alarm and CloudTrail for API audit.
- *Stack:* AWS (API Gateway, Lambda, DynamoDB, SNS, SQS, EventBridge, CloudWatch, CloudTrail), AWS SAM, Python, Pytest, Moto, GitHub Actions

Student Study Planner — AWS Capstone | GitHub 2026

- Deployed a full-stack study planner on AWS using Route 53, CloudFront, ALB, EC2 (Nginx), S3, ACM, and GitHub Actions CI/CD.
- Secured the architecture with OAC for S3, CloudFront Prefix List restrictions on the ALB security group, and EC2 access limited solely to the ALB.
- Configured an Auto Scaling Group, CloudWatch alarms for CPU and 5xx errors, and AWS Budget alerts for Free Tier cost control.
- *Stack:* AWS (Route 53, CloudFront, ALB, EC2, S3, ACM, Auto Scaling, CloudWatch), Nginx, GitHub Actions

PulseVote — Live Polling App | GitHub 2026

- Launched a real-time polling app on AWS (CloudFront, ALB, EC2, S3, ACM) with zero-downtime deploys via GitHub Actions, SCP, and SSH.
- Restricted ALB ingress to the CloudFront Managed Prefix List and EC2 ingress solely to the ALB; CloudWatch alarms for CPU and ALB 5xx.
- *Stack:* AWS (CloudFront, ALB, EC2, S3, ACM, Auto Scaling, CloudWatch), Nginx, GitHub Actions

Terraformed — Secure Static-Site Infrastructure | GitHub 2026

- Implemented a zero-secret CI/CD pipeline using AWS OIDC and GitHub Actions, replacing long-lived access keys with short-lived STS credentials on every deploy.
- Locked down the S3 origin with CloudFront Origin Access Control (OAC), blocking public access while serving HTTPS traffic.
- Configured remote Terraform state with S3 versioning and DynamoDB locking to prevent concurrent-run state corruption.
- *Stack:* Terraform, AWS (S3, CloudFront, OAC, IAM/OIDC, DynamoDB), GitHub Actions

EDUCATION

Azubi Africa Apr 2026 – July 2026

Cloud Computing & Artificial Intelligence Program

Remote

Kwame Nkrumah University of Science and Technology (KNUST) Jan 2021 – Aug 2024

Bachelor of Science in Applied Mathematics

Kumasi, Ghana
