PROFESSIONAL SUMMARY

Cloud & Software Engineer. I design AWS systems in Terraform, write Python APIs in FastAPI and Django, and ship GitHub Actions with OIDC short-lived credentials — no long-lived keys. Currently a Software Engineer intern at AmaliTech and Cloud & DevOps Engineer (part-time) at One Health Global Technologies. Proof of work: a multi-tenant file API on FastAPI and ECS Fargate that never streams binaries (S3 presigned URLs), and Event-Connect, a serverless registration app where CloudFront is the only public HTTPS endpoint.

TECHNICAL SKILLS

Cloud: AWS — EC2, ECS Fargate, S3, RDS, IAM, CloudFront, Route 53, ALB, Auto Scaling, ACM, Lambda, API Gateway, WAF, Secrets Manager, SES, CloudWatch, CloudTrail, SNS, SQS, EventBridge, VPC, OIDC/STS

IaC & Containers: Terraform, AWS SAM, Docker, Docker Compose

Languages: Python, JavaScript (ES6+), SQL, Bash, HTML5, CSS3

Frameworks: FastAPI, Django, Django REST Framework, React, Tailwind CSS

DevOps: GitHub Actions, CI/CD, Linux (Ubuntu), Git, Ruff

Data & Testing: PostgreSQL, DynamoDB, SQLAlchemy, Pytest, Moto

Security: IAM least-privilege, OIDC, Origin Access Control, WAF default-deny, TLS

EXPERIENCE

AmaliTech

Aug 2026 – Present

Software Engineer / Internship / Remote

Accra, Greater Accra Region, Ghana

- Deliver assigned work on real projects in an intensive software engineering programme.
- Collaborate with interns and technical teams to break down problems and ship working solutions.
- Apply back-end web development, software deployment, version control, and debugging in a professional engineering environment.

One Health Global Technologies

Jul 2026 – Aug 2026

Cloud & DevOps Engineer / Part-time / Remote

Greater Accra Region, Ghana

- Designed and deployed AWS infrastructure as code with Terraform.
- Automated deploys and operations with Docker and GitHub Actions CI/CD.
- Operated EC2, IAM, S3, VPC, Lambda, CloudWatch, and ECS for production workloads, with monitoring, logging, and alerting.

Kwame Nkrumah University of Science and Technology (KNUST)

Oct 2024 – Sep 2025

Information Technology Technician

Kumasi, Ghana

- Delivered Tier-1 and Tier-2 support to 200+ staff and students across hardware, software, and network incidents.
- Introduced scheduled maintenance and standardized troubleshooting docs, cutting repeat tickets for common issues.
- Administered Active Directory and network resources for 5+ departments; built an internal knowledge base of 40+ procedures.

M365Connect

Dec 2024 – Mar 2025

Python Developer (Backend) / Remote

Germany

- Designed REST APIs with Django REST Framework for data exchange across 3 client applications.
- Automated Python scraping pipelines and refactored ORM queries to remove manual data-gathering and improve query efficiency.

Happy Daffodils

Mar 2026 – Present

Team Lead / Daffodils DataCamp Scholars / Part-time / Remote

Greater Accra Region, Ghana

- Lead a remote scholar cohort: DataCamp progress and weekly XP, UX walkthroughs, and a nudge system to re-engage inactive participants.

PROJECTS

Multi-Tenant File Service API | GitHub

2026

- Built a FastAPI file service that never streams binaries: clients PUT/GET against S3 presigned URLs; the API is metadata, authentication, and authorization only.
- Isolated tenants with SHA-256 hashed API keys (constant-time compare), UUIDv4 public IDs, `app_id` on every query, and per-tenant S3 key namespacing; cross-tenant reads return 404.
- Ran FastAPI on ECS Fargate in private subnets behind an ALB across two AZs; metadata in RDS PostgreSQL 16 via SQLAlchemy 2.0. Topology in Terraform (12 modules, 3 environments); GitHub Actions runs Ruff, pytest, and coverage.
- *Stack*: FastAPI, PostgreSQL, SQLAlchemy, AWS (S3, ECS Fargate, RDS, ALB, VPC), Terraform, Docker, Boto3, GitHub Actions

Event-Connect — Serverless Event Registration | GitHub

2026

- Built an event-registration system on AWS SAM where CloudFront is the only public HTTPS endpoint; S3 stays private behind OAC and API Gateway is a hidden origin.
- Enforced WAF default-deny plus an origin-verify header so requests that skip CloudFront never reach compute; five Python 3.12 Lambdas persist events and tickets in DynamoDB.
- Shipped browse and register with an on-screen ticket receipt, browser-local My tickets, and DynamoDB-backed email lookup. Secrets in Secrets Manager; SNS scoped to an admin topic.
- *Stack*: AWS SAM, CloudFront, S3/OAC, API Gateway, WAF, Lambda (Python 3.12), DynamoDB, SNS, SES, Secrets Manager, CloudWatch

Smart Task Notification System | GitHub

2026

- Built a serverless task API where a single write fans out to DynamoDB, SNS, SQS, and EventBridge via a Lambda behind API Gateway; SNS/SQS delivery failures are logged without failing the client.
- Defined the stack as AWS SAM; pytest + moto in CI; CloudWatch Lambda-error alarm and CloudTrail for API audit.
- *Stack*: AWS SAM, API Gateway, Lambda, DynamoDB, SNS, SQS, EventBridge, CloudWatch, CloudTrail, Python, Pytest, GitHub Actions

EDUCATION

Azubi Africa

Apr 2026 – July 2026

Cloud Computing & Artificial Intelligence Program

Remote

Kwame Nkrumah University of Science and Technology (KNUST)

Jan 2021 – Aug 2024

Bachelor of Science in Applied Mathematics

Kumasi, Ghana
